

New perspectives on flexible workspace solutions

## **Solos: The Solos desk range is a comprehensive furniture system**

**“The art lies in the omission”:** this is the challenge managed by the Assmann Büromöbel development team, under the leadership of Gerd Lauszus, Head of Product Management. Clear lines, reduced design, and a multitude of applications – these are the most important features of the Solos system. The range of environments where these can be used include management offices, conference tables, classic individual workstations, and even sitting and standing bench solutions.

The Solos desks have proven especially popular in management and add a certain ‘shine’ to sophisticated environments. The slim frame is now available in chrome and seamlessly integrates into high-end design concepts with its refined appearance. “The chroming process is based on an innovative environmentally friendly galvanising technique,” Andreas Fipp, Head of Industrial Engineering and Environmental Managing at Assmann Büromöbel explains. “This ensures the Solos impresses not only with the way it looks, but the sustainable way it is produced.”

The expansion of the product line means these desks can be integrated into more than the design of individual workstations. With the new option to use Solos desks in rows and L-shaped arrangements, Assmann Büromöbel is providing a sophisticated system to allow the creation of modern large-scale work areas for individuals, ergonomic team project workstations, or tables for productive meetings and conferences. Combined with a multimedia cabinet, the new Solos Highdesk creates the ideal setting for brief, efficient standing meetings.

As usual, the new extended Solos desk system is available in the traditional Assmann Büromöbel desktop shapes, measurements, and surface colours. An optional generous cable duct and slider desktop function make cable management on the desk easy. Many options to adapt the functionality of the desk, such as PC or printer holders, or the new Flexter organisational rails, further enhance the Solos workstations.

The planning data for the complete range will be available right after the trade show, ensuring the Solos desk system will soon be available for order and delivery.
